

:: VACUUM PERFOREX ELA20P1 H1200

Description:

Blue transparent PE-based vacuum film with holes. These holes serve to vent the laminate under vacuum. The thickness of the film is 20 microns, which improves the formability at edges and corners. The holes have an opening of 1 mm. Available in rolls of 400 lm or per square metre.

Application:

Used in the vacuum and infusion system, among others, for venting the laminate during vacuum processing. Especially applicable for medium viscous resins. Temperature resistance up to 115 °C and 400 % elasticity.

Data on delivery:

Color:	Blue - transparent
Viscosity:	not applicable
Mass density:	50 gr/m ²
Shelf life:	unlimited in closed packaging
Consistency:	fixed

Technical data:

Consumption:	depending on application
Shore:	not applicable

Processing:

This film is ready for use and works best with medium viscosity resins. It should always be used in combination with a tear-off fabric and a bleeder.

Safety:

Cleaning agent for tools: water and soap.
Is not a hazardous material.
