

## :: Carbon Tape 250G

### *Description:*

Is a reinforcement material that is used for the construction of laminates with polyester, epoxy and vinylester. Due to the structure of the fabrics, you obtain increased strength compared to fibreglass.

### *Application:*

For moulded parts in all applications e.g. boat, car, construction and industry. Available in different dimensions and weights. These fibres are characterised in particular by increased tensile strength (greater rigidity).

### *Data on delivery:*

Color:	black
Viscosity:	not applicable
Mass density:	approx. 1.70 gr/cm <sup>3</sup>
Shelf life:	unlimited
Consistency:	solid

### *Technical data:*

Consumption:	approx. 250 g/m <sup>2</sup>
Shore:	not applicable

### *Application:*

Always used in combination with a resin. For higher stiffness, apply several layers on top of each other. Avoid prolonged contact with UV, this can affect the strength. You can protect a carbon laminate against UV rays, e.g. with a UV-resistant varnish.

### *Safety:*

Is not a hazardous material and may be treated as such. Always provide appropriate protective clothing and gloves.

Cleaning agent for tools: water.
