

## :: Glass fabric

### *Description:*

Reinforcement material used to build up laminates with polyester, epoxy and vinylester. Due to the structure of the fabrics, you obtain increased strength. Exists in different versions and weights: available in 1, 5, 10 m<sup>2</sup> prepackaged and in 50 kg or 100 lm rolls.

### *Application:*

For moulded parts in all applications, e.g. boat, car, construction and industry. Available in different weights: 80, 160, 350, 400, 580, 600 and 800 gr/m<sup>2</sup> and in line, twill, satin and roving weave. Roll width 100 cm - 127 cm.

### *Data on delivery:*

Color:	white
Viscosity:	not applicable
Mass density:	approx. 2.61 gr/cm <sup>3</sup>
Shelf life:	unlimited
Consistency:	solid

### *Technical data:*

Consumption:	depending on the type of fabric
Shore:	not applicable

### *Application:*

Always processed in combination with a polyester, vinylester or epoxy resin. For higher strength, apply several layers on top of each other.

### *Safety:*

Always wear suitable protective clothing and gloves. Is not a hazardous material and may be treated as such. Cleaning agent: water.
