

:: Glass fiber powder bound 15 TEX

Description:

Reinforcement material used to build up laminates with polyester or vinylester. Suitable for parts in contact with water due to its powdered binding. Universal quality. Has a 15 Tex fibre structure, which is finer than the structure of the standard glass mat. Available in 10 m² and in roll widths of 1,270 and 40 kg.

Application:

For moulded parts in all applications e.g. boat, car and construction. Due to the finer structure, these mats are more suitable for fine finishing.

Data on delivery:

Color:	white
Viscosity:	not applicable
Mass density:	-
Shelf life:	unlimited
Consistency:	solid

Technical data:

Consumption:	depending on the application
Shore:	not applicable

Application:

Always used in combination with a polyester or vinylester resin. For higher strength or layer thickness, apply several layers on top of each other. Store in a dry and frost-free place.

Safety:

Always wear suitable protective clothing and gloves. Is not a hazardous material and may be treated as such. Cleaning agent: water.
